Meet the penguins

The `penguins`data from the palmerpenguins (2020) package contains size measurements for 344 penguins from three species observed on three islands in the Palmer Archipelago, Antarctica. Originally collected by an ecological study on sexual dimorphism and environmental variability of Antarctic Penguins (Gorman et al. 2014)

Results

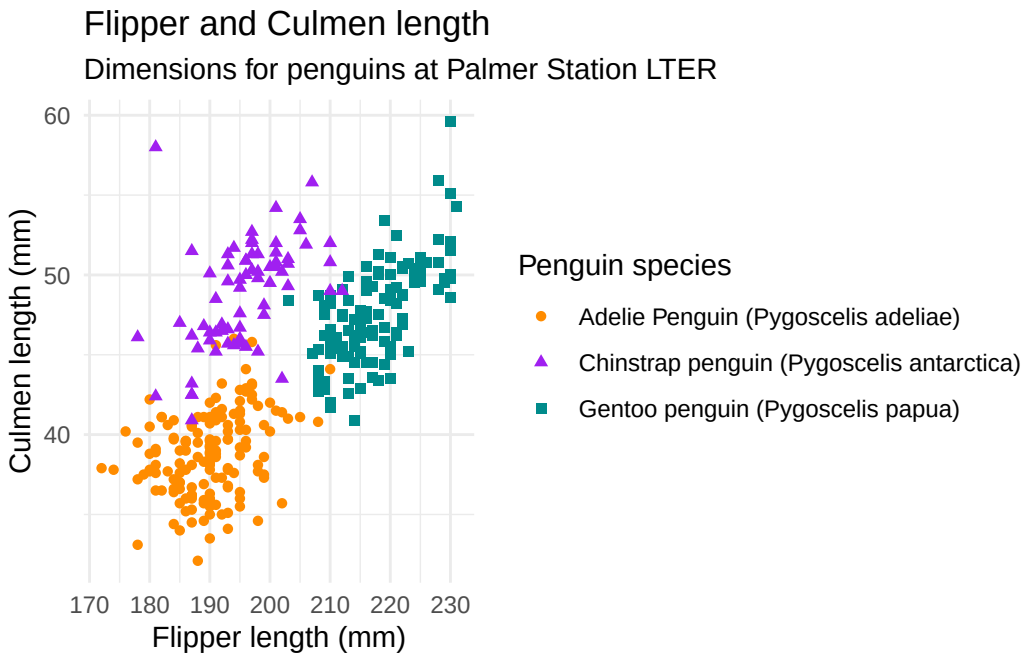

Number of Penguin Species and Flipper Length

A simple calculation shows that 25 + 25 = 50.

The dataset contains 0 Gentoo penguins and 0 Chinstrap penguins.

The average flipper length is 200.92 mm.
